Pommaret J.F. and Quadrat A. A functorial approach to the behaviour of multidimensional control systems	7
Hätönen J. and Ylinen R. Polynomial systems theory applied to the analysis and design of multidimensional systems	15
Idczak D., Majewski M. and Walczak S. Stability analysis of solutions to an optimal control problem associated with Goursat-Darboux problem	29
Dymkou V. and Dymkov M. An application of the Fourier transform to optimization of continuous 2-D systems	45
Kurek J.E. Controllability and reconstructability of a system described by the N -D Roesser model	55
Kaczorek T. Canonical forms of singular 1D and 2D linear systems	61
Rabenstein R. and Trautmann L. Towards a framework for continuous and discrete multidimensional systems	73
Galkowski K., Rogers E., Paszke W. and Owens D.H. Linear repetitive process control theory applied to a physical example	87
Longman R.W. On the interaction between theory, experiments, and simulation in developing practical learning control algorithms	101
Avrachenkov K.E. and Longman R.W. Iterative learning control for over- determined, under-determined, and ill-conditioned systems	113
